### TVOS项目概要设计说明书

- 1项目简介
  - 1.1目的
  - 1.2 实现

#### 2 概要设计

- 2.1数据获取
  - 2.1.1各版块记录获取
  - 2.1.2 记录中详细信息的获取
  - 2.1.3 代码实现
- 2.2 数据分析
  - 2.2.1modify-time
  - 2.2.2 name:modify-time
  - 2.2.3 number-branch
  - 2.2.4 number-project
  - 2.2.5 file path-commens size
- 2.3 数据存储
  - <u>2.3.1 record</u>
  - 2.3.2 info
- 2.4 Django后台搭建
  - 2.4.1 Model
  - 2.4.2 Template
  - 2.4.3 View
- 2.5 服务器部署
- 2.6 前端设计
  - 2.6.1 ECharts
  - 2.6.2 Bootstrap
  - 2.6.3 网页功能

### 3 后记

- 3.1错误与解决
  - 3.1.1 Django中静态文件路径
- 3.2 后期安排

#### 4 参考

### 5 附录

- 5.1 数据获取部分代码
  - 5.1.1 获取三个版块的json文件源码
  - 5.1.2 获取记录文件中对应的详细json文件源码
- 5.2 数据分析部分代码
  - 5.2.1 获取修改量-时间的list
  - 5.2.2 图2-1源码
  - 5.2.3 图2-2源码
- 5.3 数据存储部分代码
- 5.4 Django后台搭建部分代码
  - 5.4.1 view.py的部分代码
- 5.6 前端设计部分代码
  - 5.6.1 branch.html

# TVOS项目概要设计说明书

# 1项目简介

# 1.1目的

分析http://120.25.200.39:8081上的数据,并将信息可视化展现在搭建的网址上

## 1.2 实现

Django+MySQL+ECharts+Bootstrap

# 2 概要设计

## 2.1数据获取

### 2.1.1各版块记录获取

首先访问网址,使用F12,动态抓包(Network->Headers),获取到如下信息

对于open, Merged, Abandoned, 显示界面的json文件如下:

- Open <u>http://120.25.200.39:8081/changes/?n=25&O=81</u>
- Merged <a href="http://120.25.200.39:8081/changes/?q=status:merged&n=25&O=81">http://120.25.200.39:8081/changes/?q=status:merged&n=25&O=81</a>
- Abandoned <a href="http://120.25.200.39:8081/changes/?q=status:abandoned&n=25&O=81">http://120.25.200.39:8081/changes/?q=status:abandoned&n=25&O=81</a>

### 2.1.2 记录中详细信息的获取

点击网页上面版块任一条目,进入详细信息,其json文件网址为

http://120.25.200.39:8081/changes/1637/revisions/205f3f9694e931de9779cdbaa82c5bb881751899/files

分析上面网址,有两个地方是变化的:

- 一个是1637,一个是205f3f9694e931de9779cdbaa82c5bb881751899 1637代表的是该条目的编号,在对应版块的json文件中可获取(\_number)
- 第二个为commit的编号,通过查看Network中显示的文件,发现在下面的json文件中可获取 http://120.25.200.39:8081/changes/1637/detail?O=404

### 2.1.3 代码实现

见附录5.1数据获取

# 2.2 数据分析

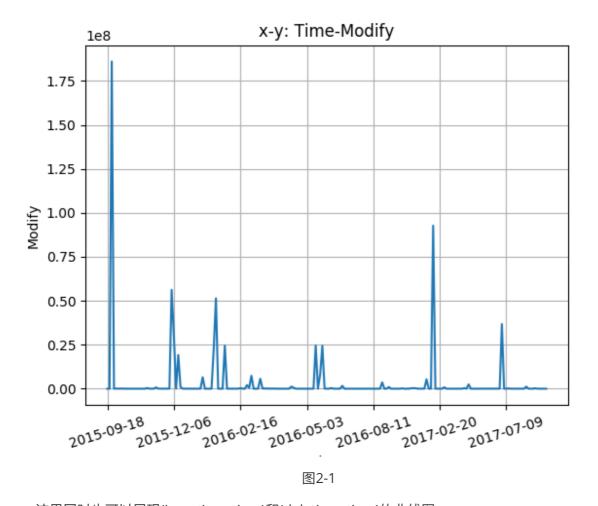

因为网页到底要展现什么是模糊的,因此数据分析只能通过数据的基本特征来分析,现自定如下:

## 2.2.1modify-time

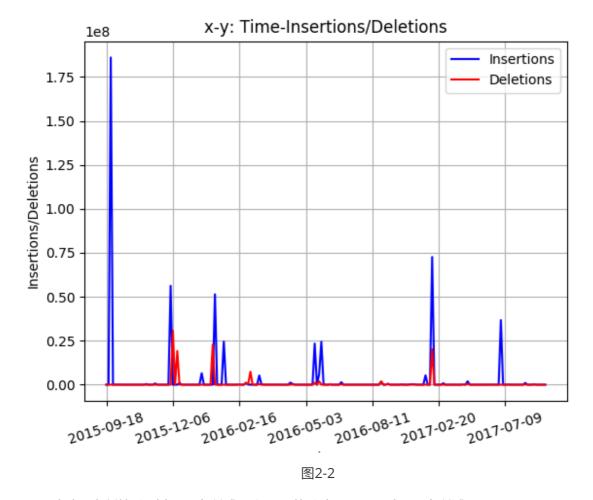

获取每天的修改量,制作(modify,time)的曲线图

modify=insertions+deletions

time=created

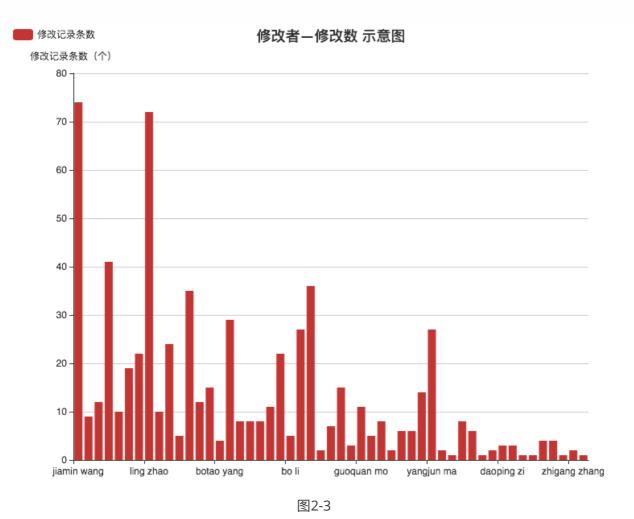

——这里同时也可以展现(insertions,time)和(deletions,time)的曲线图

——可以对三个版块分别实现1中所述,和不同的分支(Branch)实现1中所述

# 2.2.2 name:modify-time

对每个修改者,即记录中的name,统计(modify,time)

## 2.2.3 number-branch

统计各分支的占比

# Branch 分布 示意图

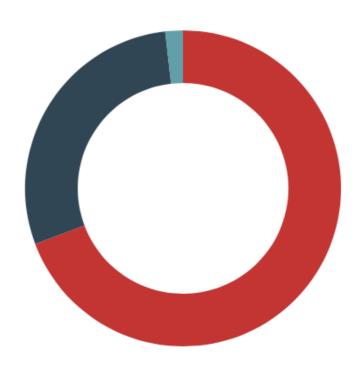

图2-4

# 2.2.4 number-project

统计项目占比

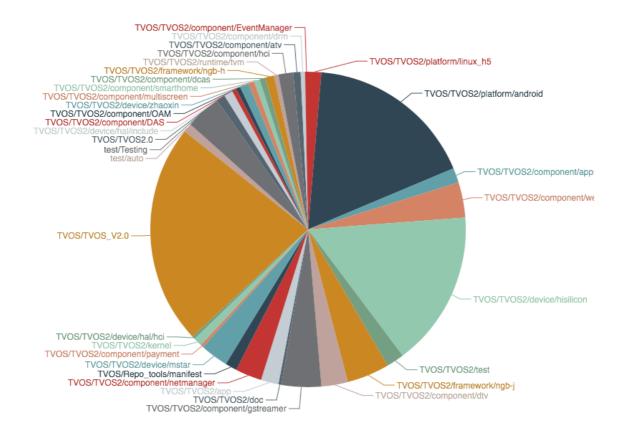

图2-5

## 2.2.5 file\_path-commens\_size

进入每个记录,获取其中的File Path和Commens Size ,制作(File\_Path,Commens\_Size)的柱状图此处的File\_Path可以选取一部分,以便更加明显【可作为各文件的活跃度指标】 暂时分析上述,具体后续,此部分需要明确清楚

# 2.3 数据存储

暂定MySQL, 根据数据分析部分, 具体建表如下(待定)

### **2.3.1 record**

record\_table

字段名称	字段描述	字段类型	备注
number	标号	UNSIGNEDINT	主键
insertions	增量	UNSIGNEDINT	
deletions	删量	UNSIGNEDINT	
updated	更新日期	DATE	
owner	拥有者	CHAR()	
branch	分支	CHAR()	
project	项目名	CHAR()	

### 2.3.2 info

### info\_table

字段名称	字段描述	字段类型	备注
filepath	修改的文件路径	CHAR()	联合主键
number	标号	UNSIGNEDINT	联合主键
insertions	增量	UNSIGNEDINT	
deletions	删量	UNSIGNEDINT	

【这一块因为Django默认的是sqlite(数据量比较小适合),就先用sqlite实现(这里初步的想法是先将数据进行统计,删除不必要的信息,对筛选的数据再构建数据表进行存储),后期如果不行或者有时间再改】

# 2.4 Django后台搭建

Django框架中一个项目可以有多个app,在app中完成前后端的交互,分为三个部分类似于MVC模式的MTV模式

### 2.4.1 Model

负责业务对象和数据库的关系映射

这里对应的是models.py文件,用于定义数据表及其类型【暂时还没有写好,后期补上】

### 2.4.2 Template

负责如何把页面展示给用户

这里对应的时templates目录下的html文件,前端html文件全放于此,对于前端中使用到的css,js等文件,需要再app(后者其他目录)下新建static目录,后台回去查找static目录,见**3.1.1** 

详细见前端部分

#### 2.4.3 View

负责业务逻辑,并在适当时候调用Model和Template

这里对应的是views.py文件,在其中定义函数,获取数据,并传入前端界面

函数名和前端访问网址对应,在项目中的urls.py中使用正则匹配获取网址,并对应到view.py中的函数可见附录**5.4.1**部分代码(未处理的)

【此处还需要写不同的响应函数,待后期完善】

## 2.5 服务器部署

[void]

## 2.6 前端设计

### 2.6.1 ECharts

按照ECharts官网,下载echarts库,并在html文件的head下导入

```
<script src="/static/echarts.min.js"></script>
```

接下来只需要实现如下脚本在 <script> 中

对需要显示的div初始化如下:

```
var ownerChart=echarts.init(document.getElementById('owner'))
```

设置option,在其中接收传入的数据,以json传入,这里需要使用safe,如下:

```
data:{{ name | safe }}
```

最后设置生效:

```
ownerChart.setOption(option);
```

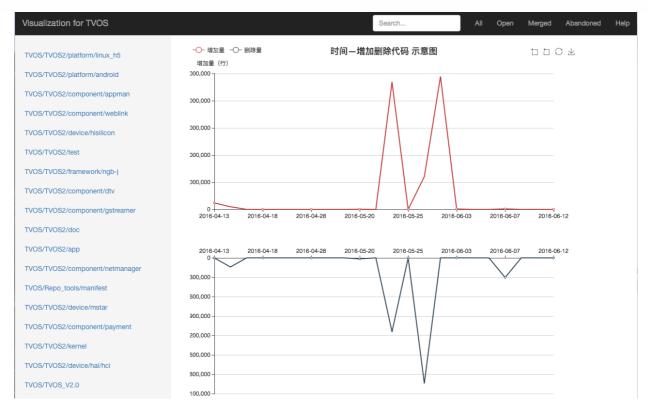

显示部分见2.2

## 2.6.2 Bootstrap

使用Bootstrap框架来实现前端界面,这里使用官网中的样例

将Bootstrap和样例中的css, js文件放置于static目录下

整个界面分为三部分,由左侧的项目框和各版块的导航条,以及中间的显示部分组成,网页截取一部分如下所示:

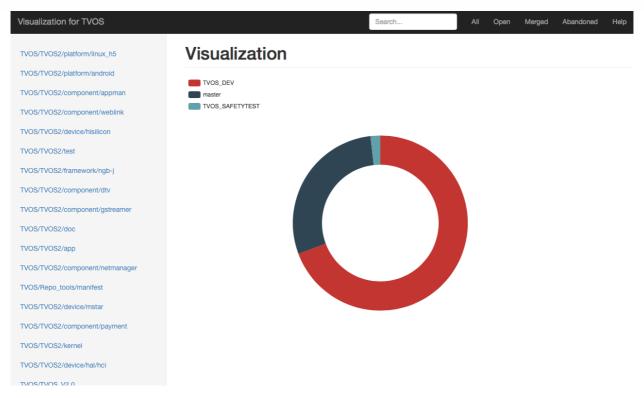

这里左侧项目条和上侧导航条部分,在点击过程中,网页不会跳转,只会让中间部分根据不同的数据 重新绘制,具体实现如下:

前端部分需要用到jquery,导入jquery文件,以及点击只更新指定div

这里载入的../branch, 是网址对应的上级目录下的branch目录,后台会先在urls.py文件中匹配该网址,找到对应的name参数,再在views.py中找到以name参数命名的函数名,如下

```
def branch(request):
    branch_name = ['TVOS_DEV', 'master', 'TVOS_SAFETYTEST']
    branch_num = [460, 192, 12]
    return render(request, 'branch.html',
{'branchName':json.dumps(branch_name),'branchNum': json.dumps(branch_num)})
```

在该函数中获取数据,加载到branch.html上,branch.html的功能是根据传入的数据绘制Branch图,branch.html就会替换原有的div显示部分,仅该div刷新,如下图:

[这里只是举个例子,将该div显示部分换成Branch图]

### 2.6.3 网页功能

- 点击导航条的All标签,中间会显示三幅图:修改量-时间,项目分布图,Branch分布图;同理点 击Merged和Abandoned标签会显示对应版块下的这三幅图
- 点击左边的项目,会显示该项目修改量-时间的统计,以及该项目各文件夹的活跃程度
- 待增加

# 3后记

# 3.1错误与解决

# 3.1.1 Django中静态文件路径

比如把 echarts.min.js 文件放置在templates下和index.html同级目录,按理直接使用

```
<script src="echarts.min.js"></script>
```

便可,但是访问时却显示: Not Found charts.min.js

**解决:** 在app目录下(这个随意,会自动查找static文件夹)新建static文件夹,然后将js文件存放在其中,再在settings.py文件中声明static目录:

```
STATIC_PATH=os.path.join(os.path.dirname(__file__),'static').replace('\\','/
')
```

在index.html中使用

<script src="/static/echarts.min.js"></script>

即可

# 3.2 后期安排

- 1. 首先是实现MySQL数据库查找相应数据,分析,然后实现model中的数据表
- 2. 以及对每条记录中的信息分析,实现各项目各文件活跃度的分析
- 3. views.py实现前端对应的函数
- 4. 前端界面优化,或添加新功能
- 5. 数据更新的问题, 自动化实现
- 6. 搭建服务器,这个可早可晚
- 7. 完结!

# 4 参考

- [3] ECharts
- 【4】Bootstrap官方文档

# 5 附录

# 5.1 数据获取部分代码

5.1.1 获取三个版块的json文件源码

```
import json
import requests
#获取三个版块的json文件
def get_record_data():
   #动态抓包获取各版块的json文件网址,存储在字典中
   section_dict={}
   section_dict['open']='http://120.25.200.39:8081/changes/?n=25&0=81'
   section_dict['merged']='http://120.25.200.39:8081/changes/?
q=status:merged&n=25&0=81'
   section_dict['abandoned']='http://120.25.200.39:8081/changes/?
q=status:abandoned&n=25&O=81'
   filename_list=[]#获取记录的文件名
   #遍历访问网址获取数据,以json存储在data中
   for key ,value in section dict.items():
       flag = 1
       num = 0
       while flag:
           json_open = requests.get(value + "&S=" + str(num)).text#获取文件
的文本形式
           json_open = json_open.strip().split(']}\'\n')[1]#去除文本中的第一行
           #这里小于5表示空,即next到头了,结束next;否则将数据写入文件
           if len(json_open) < 5:</pre>
               flag = 0
           else:
               with open('data/record/'+key+'_' + str(num) + '.json', 'w')
as f:
                   f.write(json open)
                  filename_list.append(key+'_'+str(num))
                  print(key+str(num)+"has wirtten !")
           num += 25
   return filename list
```

## 5.1.2 获取记录文件中对应的详细json文件源码

```
#获取记录详细信息
def get_record_info_data(filename_list):
    for filename in filename list:
        with open('data/record/'+filename+'.json','r') as f:
           records json=json.load(f)
        for record in records json:
           number=record[' number']
            print(number)
url_str2='http://120.25.200.39:8081/changes/'+str(number)+'/detail?0=404'
            detail=requests.get(url str2).text
           detail = detail.strip().split(']}\'\n') # 去除文本中的第一行
           if len(detail)<2:continue
           detail=detail[1]
           detail='['+detail+']'
            with open ('data/info/'+filename.split(' ')
[0]+'/detail/detail'+str(number)+'.json','w') as f:
                f.write(detail)
           with open ('data/info/'+filename.split(' ')
[0]+'/detail/detail'+str(number)+'.json','r') as f:
                detail=json.load(f)
                print(filename+"detail"+str(number)+"has written!")
            revision=detail[0]['current revision']
            url str1 =
'http://120.25.200.39:8081/changes/'+str(number)+'/revisions/'+str(revision)
+'/files'
            info=requests.get(url str1).text
            info = info.strip().split(']}\'\n') # 去除文本中的第一行
           if len(info)<2:continue
           info=info[1]
           with open('data/info/' + filename.split('_')[0] +"/" +
str(number) + '.json','w') as f:
                f.write(info)
                print(filename+str(number)+"has written!")
```

# 5.2 数据分析部分代码

### 5.2.1 获取修改量-时间的list

```
def get_modify_time():
   mod_ti_dict={}
   filelist=os.listdir('data/record')#获取data/record目录下的全部文件名
   for filename in filelist:
       with open('data/record/'+str(filename),'r') as f:
           record_data=json.load(f)
       if len(record data)<1:continue
       for record in record data:
           updated_time=record['updated'][:10]
           if updated_time not in mod_ti_dict.keys():
               mod ti dict[updated time]='0#0'
           insert,delete=mod_ti_dict[updated_time].split('#')
           insert=int(insert)+record['insertions']
           delete=int(delete)+record['deletions']
           mod_ti_dict[updated_time]=str(insert)+'#'+str(delete)
   #print(mod_ti_dict)
   ti_list=[key for key in mod_ti_dict.keys()]
   ti_list=sorted(ti_list)#对时间排序
   mod list=[]
   mod_insert_list=[]
   mod delete list=[]
   #按照排好序的时间list来获取value值
   for ti in ti list:
       mod_insert,mod_delete=mod_ti_dict[ti].split('#')
       mod_insert_list.append(int(mod_insert))
       mod_delete_list.append(int(mod_delete))
       mod_list.append(int(mod_insert)+int(mod_delete))
   return ti list, mod list, mod insert list, mod delete list
```

### 5.2.2 图2-1源码

```
#绘制时间-修改量的图

def draw_modify_time(ti_list,mod_list,tag_str):
    x=[i+1 for i in range(len(ti_list))]
    #plt.bar(x,mod_list,width=5,color='y')#条形图
    plt.grid(True)
    plt.plot(x,mod_list)
    # 设置x轴的标签,第一个参数对应x的位置,第二个参数对应x的位置上的text(这里是日期),第三个参数是旋转度
    plt.xticks(x[::30],ti_list[::30],rotation=17)

plt.xlabel('Time')
    plt.ylabel(tag_str)
    plt.title(r'x-y: Time-'+tag_str)

plt.show()
```

### 5.2.3 图2-2源码

```
#绘制时间-增加量,时间-删除量的图

def draw_ins_de_time(ti_list,ins_list,de_list):
    x=[i+1 for i in range(len(ti_list))]
    #plt.bar(x,mod_list,width=5,color='y')#条形图
    plt.grid(True)
    plt.plot(x,ins_list,color='b',label='Insertions')
    plt.plot(x,de_list,color='r',label='Deletions')
    # 设置x轴的标签,第一个参数对应x的位置,第二个参数对应x的位置上的text(这里是日期),第三个参数是旋转度
    plt.xticks(x[::30],ti_list[::30],rotation=17)

plt.xlabel('Time')#x轴
    plt.ylabel('Insertions/Deletions')#y轴
    plt.title(r'x-y: Time-Insertions/Deletions')#标题
    plt.legend()#这行表示显示标签(是plot中的标签)
    plt.show()
```

## 5.3 数据存储部分代码

[void]

# 5.4 Django后台搭建部分代码

## 5.4.1 view.py的部分代码

```
def home(request):
